1	EL74501	Major Project Phase II	-	-	-	12

**Total Credits**

**88 Credits**

## Programme Objectives

An embedded system is a programmed controlling and operating system with a dedicated function within a larger mechanical or electrical system, often with real-time computing constraints. It is embedded as part of a complete device often including hardware and mechanical parts. Following are the programme objectives:

1. To practically apply gained theoretical knowledge in order to design, analyse and implement embedded systems,
2. To acquire knowledge of and be able to use tools for the development and debugging of programs implemented on microcontrollers and DSPs.
3. To apply formal method, testing, verification, validation and simulation techniques and tools in order to engineer reliable and safe embedded systems
4. To acquire knowledge of sensor properties and apply these in the design of Electronic systems which integrate measurement and actuation in different industrial production contexts.
5. Exposure to the emerging field of Internet of Things

## SEMESTER - I

<b>EL71105</b>	<b>Embedded Microcontrollers</b>
----------------	----------------------------------

### Course Objectives

This course is structured to combine lectures, insightful demonstrations, case studies and tutorials for the students to gain an in-depth understanding of fundamental concepts on embedded systems. Upon completion of this subject, the students should be able to:

1. Understand the hardware and software components as well as their development cycles,
2. Understand the deployment of embedded processors and supporting devices in real-world applications
3. Interpret application specifications and make practical recommendations on resource selection for embedded systems.
4. Understand key concepts of embedded systems like IO, timers, interrupts, interaction with peripheral devices

**Computer Architectures:** RISC/CISC and Harvard. Princeton Architectures Introduction: The 8051. Microcontroller, Criteria for choosing a microcontroller, 8051 Family members & block diagram. The 8051 Assembly Language Programming: 8051 internal registers, Structure of Assembly Language, Program Counter & ROM Space, Data types & Directives, PSW, Register Banks & Stack. JMP, LOOP & CALL Instructions: Looping, Conditional & unconditional jump, LCALL, ACALL, PUSH, POP instructions & Subroutines. Time Delay Generation & Calculation. I/O Port Programming: Pin description, I/O Ports, Bit addressability & Read-modify-write feature.

**Addressing Modes:** Addressing modes, Indexed addressing & Look up tables, SFR registers and their addresses. Arithmetic & Logical Instructions: Addition, subtraction, BCD numbers and DA A instruction, multiplication and division, signed number and overflow problem in arithmetic operations. Logic & Compare Instructions, Rotate & Swap Instructions, BCD & ASCII conversion programs. Single Bit Instructions: Single bit instructions, Registers & bit addressability, Bit addressable RAM, Reading input pins Vs. Port Latch. 8051Timer /Counter Programming: Timer Registers, TMOD Register, Timer mode 1, mode 2, mode 3 programming. Counter Programming.

**8051 Serial Communication:** Basics of serial communication, Asynchronous serial communication & data framing, RS 232 standards, MAX 232. Baud rate selection & T1 register, SBUF, SCON Registers, and Serial port Programming to transmit & receive data serially.

**8051 Interrupts Programming:** 8051 interrupts, IVT for 8051, IE register, TCON register and Timer Interrupts, External H/W Interrupts Programming. Serial Port Interrupts Programming, Interrupt Priority upon reset and IP register.

**Real World Interfacing:** LED, Switches, LCD, ADC, DAC, Sensors, Stepper Motor, Keyboard, and Memory.

2. Microcontrollers: Architecture, Programming & System Design: Rajkamal Pearson Education
3. 8051 Microcontrollers Arch., Programming & Applications: K. J. Ayala Penram International

<b>EL71106</b>	<b>Advanced Logic Design</b>
----------------	------------------------------

## Course Objectives

To understand:

1. VHDL basics
2. Design of Combinational and Sequential Circuits
3. Modelling styles of VHDL and their advantages

## Unit I

Boolean Algebra, Minimization of Boolean functions, Karnaugh Map and Applications, Two variable K-map, Three variable K-map, Four variable K-map, Five variable K-map, Don't care combinations.

## Unit II

VHDL, History, Capabilities, Hardware Abstraction, Overview of VHDL: Basic Terminology, Entity Declaration, Architecture Body, Structural modeling, Behavior Modeling, Data Flow modeling, Mixed Style of Modeling, Configuration Declaration, Package Declaration, Package Body, Model Analysis, Simulation

## Unit III

Combinational logic circuits: Arithmetic Circuits - Half adders, Full adders, Half Subtractor, Full Subtractor, Code Converters: Binary to Gray code converters, Gray-to-binary Converter, BCD-to-excess-3 Code Converter, Excess-3 - to - BCD Code Converter, Parity Generator and Parity Checker, BCD Adder, Magnitude Comparators, Encoders, Decoders: Different type of decoders, BCD-to-seven-segment decoder, Implementation of functions using decoder, Multiplexer, Implementation of functions using decoder, Demultiplexer, Analysis of combinational circuit, Realization of combinational circuit from verbal description

#### Unit IV

Sequential circuits : Latches & Flip-flops, RS, JK, D and T flip-flops, and Synthesis of inputs, Race around problem, Master Slave flip flops, Edge Triggering and Level Triggering, Interconversion of flip-flops, Analysis of Sequential circuit on the basis of state equation, state table and state diagram.

Registers: Introduction of Registers, Shift Registers, Types of Shift Registers: SISO, SIPO, PISO, PIPO, Bidirectional Shift Registers, Ring Counter, Johnson Counter

Counters: Asynchronous (Ripple) Counters, Asynchronous Decade Counter, Asynchronous Binary Counters

#### Unit V

Basic Language Elements: Identifiers, Data Objects, Data Types, Operators. Modeling Style: Behavioral Modeling: Process Statement, Variable Assignment Statement, Signal Assignment Statement, Wait Statement, If Statement, Case Statement, Loop Statement, Exit Statement, Next Statement, Assertion Statement, Data Flow Modeling: Concurrent Signal Assignment Statement, Concurrent versus Sequential Signal Assignment, Conditional Signal Assignment Statement, Selected Signal Assignment Statement, Block Statement, Concurrent Assertion Statement, Structural Modeling, Packages and Libraries: Package Declaration, Package body, Design Libraries

#### Unit VI

Introduction of Synchronous Sequential Machines, Realization of Flow table from verbal description for designing of sequential circuit, Realization of synchronous sequential circuit using different flip flops, Sequence Detector, Designing of sequence detector using different flip flops., Mealy and Moore model Machines, Inter-conversion between Mealy and Moore machine. Model Simulation: Simulation on FPGAdv, Test Bench Generation. VHDL code for mealy and Moore FSM.

#### References

1. Digital Design III 3rd edition: M. Morris Mano.
2. Z. Kohavi (TMH), "Switching & Finite Automata Theory".
3. A VHDL Primer: J.Bhaskar, III Edition, Pearson Education Asia
4. VHDL: Douglas Perry, III Edition, Tata McGraw Hill

<b>EL71102</b>	<b>Linux Scripting and Networking</b>
----------------	---------------------------------------

#### Course Objectives

1. Understand Linux Operating System
2. Use command substitution to capture program output in Linux Operating System
3. Use conditional statements to control the execution of shell scripts.
4. Able to do shell, Awk and perl Programming
5. Understand Embedded Linux System

General Overview of the System: Introduction, Linux and Unix System structure, Features of Unix and Linux System, user perspective, O/S services assumption about Hardware. The Kernel and buffer cache architecture of Unix O/S, System concepts, Kernel data Structure, Kernel functions, System administration, Buffer headers, Structure of the buffer pool, Scenarios for retrieval of the buffer, Reading and writing disk block, Advantage and disadvantage of buffer cache.

Internal Representation of Files: INODES, Structure of File System and Directories, Super block, Inode assignment to a new file, Allocation of disk blocks, File System and Types, Tuning and repairing File Systems.

System Calls for the System: Open read write file and record close, File creation, Operation of special files change directory and change root, change owner and change mode, STAT and FSTAT, PIPES Mounting and unmounting files system, Link Unlink.

Structures of Processes and process control: Process states and transitions layout of system memory, Process attribute, the context of a process, manipulation of process address space, Sleep process creation/termination. The user Id of a process, changing the size of a process. The SHELL, System Security.

Interprocess Communication and multiprocessor system: Process tracing system V IPO network communication sockets problem of multiprocessors systems, solution with master and hare process, and solution with semaphores.

Introduction to shell scripts: shell Bourne shell, C shell, Unix commands, permissions, editors, filters sed, grep family, shell variables, scripts, metacharacters and environment, if and case statements, for while and until loops. Shell programming.

Awk and perl Programming: Awk pattern scanning and processing language, BEGIN and END patterns, Awk arithmetic and variables, Awk built in variable names and operators, arrays, strings, functions, perl; the chop() function, variable and operators, \$\_ and \$. , Lists, arrays, regular expression and substitution, file handling, subroutines, formatted printing.

Introduction to Embedded Linux System: Embedded Linux system and structure, storage and kernel based options on embedded system, File structure and develop embedded based environment, Mobile based Linux Operating System.

**Case Study:** Installation of Linux, Customization of Linux, Installation of SAMBA, APACHE TOMCAT, Send MAIL, Postfix, Implementation of DNS, LDAP services, Firewall, Proxy server

## References

2. Behrouz A. Forouzan, Richard F. Gilberg : UNIX and Shell Programming- Cengage Learning – India Edition. 2009.

<b>EL71103</b>	<b>System Programming</b>
----------------	---------------------------

## Course Objectives

1. Understand Object Oriented Principles.
2. Understand need and importance of JAVA Language
3. Understand and develop Core JAVA Programs.
4. Able to create packages, API and jar files.
5. Develop application using Swing, Applets, AWT and IO Package, database connectivity
6. Develop GUI Application using swing.
7. Develop minor project having GUI front end which fetches the data from backend.

**Object Oriented Analysis:** Review of object oriented concepts, potential benefits and drawbacks of object oriented. Compare object oriented paradigm with structural/procedural paradigm. What is class, how to Identify them, relationship among objects, relationship among classes.

**Introduction to JAVA:** Features of Java, How to write simple Java programs, Understanding CLASSPATH, Java keywords, Lexical issues, Comments, Reserved Keywords, Identifiers, Literals, Operators, Separators, Variables, Naming Conventions, Data Type- Numeric types, Integers, Floating

point numbers, Casting characters, Boolean, Simple type, Arrays, Multiple dimensional arrays, Type conversion & casting, Operators, Control Statements, Selection Statements, Iteration Statements.

**Introducing Class:** Class fundamentals, Declaring objects, new and dot operator, this keyword, Introducing methods, Constructors, Garbage collection, Overloading methods and constructor, Nested and Inner class.

**Inheritance:** Extending classes, Access modifiers, Keywords- super, final, static, finalize method, Method overriding, Dynamic Method Dispatch, Abstract classes, The Object class and Class class.

**Packages and Interfaces:** Defining a package, Access Protection in packages, importing packages, Access protection, Defining an Interface, Implementing Interfaces, Applying interfaces, Variables in interfaces, Achieving multiple inheritances through interfaces.

**String Handling:** String Class, String constructors, Special string operations, Character extracting, String comparison, Searching strings, Modifying a string, Strings buffer, Different string methods.

**Exception Handling:** Fundamentals, Exception types, try and catch, Multiple catch clauses, nested try statements, Throw, throws and finally, Exception subclasses, Creating own exception classes.

**Multithreading:** Thread basics, Creating and running a thread, The thread life cycle, Thread priorities, Advanced threading, Asynchronization, Messaging, Inter thread communications, Priorities and Scheduling, Daemon threads.

**Introduction to Applets, AWT Package :** Buttons and Labels, Checkboxes and Radio Buttons, Choices, Lists, Text Fields, **Scanner Class. JDBC and ODBC connectivity**

3. David Flanagan, "Java in a Nutshell", 3rd Edition, O'Reilly Media

<b>EL71104</b>	<b>Digital Signal Processing</b>
----------------	----------------------------------

## Course Objectives

1. To learn the theory and practice of Digital Signal Processing
2. To design and implement FIR and IIR digital filters
3. To study the architecture and features of DSP Processor
4. To learn practical applications of Digital Signal Processing

**Signal Processing Review:** Signals, Systems and Applications, Amplification, distortion, and noise, Linear, time-invariant systems, impulse response and convolution sum, linear constant-coefficient difference equation, Fourier transform and frequency response

**The Generic DSP System Introduction:** ADCs and DACs / Signal Conditioning, Anti-alias and Reconstructions Filters Distortion, Quantization Error and Noise, The Nyquist Sampling Rate, z-domain representation and transforms Frequency Domain Analysis :Periodic, aperiodic and random signals, The DFT, DTFT and FFT, Signal analysis and synthesis based on DFT, Modern spectral analysis, Time/Frequency Representation

**Digital Filtering** :FIR and IIR Digital Filters, Digital Filter Design Parameters and methods, All-pass, low-pass, band-pass, comb filters etc., Poles and zeroes and the Z-domain DSP Software/Hardware:The Generic DSP Processor Architecture, Application Specific Integrated Circuits, DSP Design and Analysis Software, Application specific – MATLAB programming. Filter Design: Fundamental structures of digital filters, Internal representation of LTI systems, Digital filter design – I, Digital filter design – II

**DSP Audio/Baseband Processing:** Over-/under-sampling; Sigma delta ADC/ DACs, Sample rate; decimation & interpolation, Quantization noise shaping Adaptive DSP Algorithms: Least squares (LS) and Least mean squares (LMS), Channel equalisation / Inverse system identification, Echo Control for feedback suppression, Acoustic echo control /noise control DSP Baseband Communications : Information theory, AM/FM/PM modulation; ASK/PSK/FSK Signaling, Pulse shaping / Matched Filtering /Root Raised Cosine , Data equalisation , Error control and coding.

## SEMESTER – II

<b>EL72105</b>	<b>VLSI Design Methodologies</b>
----------------	----------------------------------

#### Course Objectives

1. Be able to use mathematical methods and circuit analysis models in analysis of CMOS digital electronics circuits, including logic components and their interconnect.
2. Be able to create models of moderately sized CMOS circuits that realize specified digital functions.
3. Be able to apply CMOS technology-specific layout rules in the placement and routing of transistors and interconnect, and to verify the functionality, timing, power, and parasitic effects.
4. Have an understanding of the characteristics of CMOS circuit construction.
5. Be able to complete a significant VLSI design project having a set of objective criteria and design constraints.
6. To provide experience designing integrated circuits using Computer Aided Design(CAD) Tools.

**Introduction to CMOS VLSI Design:** Historical Perspective, Overview of VLSI Design Methodologies

**Fabrication of MOSFETs:** CMOS logic, fabrication and layout, Design methodology and tools, Fabrication Process Flow – Basic steps, CMOS n-well process, Layout Design rules

**MOS Transistors, MOS Inverters:** MOS Transistor theory, Layout Design Rules, Circuit characterization and performance estimation, Circuit Simulation, Static Characteristics, Switching Characteristics and inter connect effect, Combinational MOS, Logic Circuits and Sequential MOS Logic Circuits,

**Dynamic Logic Circuits:** Basic Principles of Pass Transistors, Voltage Bootstrapping, Dynamic CMOS circuit Techniques, Combinational and sequential circuit design

**Semiconductor Memories:** DRAM, SRAM, Flash Memory, Non Volatile Memory, Memory system design

<b>EL72102</b>	<b>Real Time Systems</b>
----------------	--------------------------

### Course Objectives

1. Real-time scheduling and schedulability analysis
2. Formal specification and verification of timing constraints and properties
3. Design methods for real-time systems
4. Development and implementation of new techniques to advance the state-of-the-art real-time systems research

### Introduction

Modeling Timing constraints

Scheduling Real-Time Tasks: Types of Schedulers, table-driven, Cyclic, EDF, RMA

Handling Resource sharing among real-time tasks

Scheduling Real-Time Tasks in Multiprocessor and Distributed systems

Commercial Real-time operating systems: General concepts, Unix and

Windows as RTOS

Survey of commercial RTOS

<b>EL72104</b>	<b>Advanced Embedded Microcontroller - ARM</b>
----------------	--

### Course Objectives

1. To provide in-depth knowledge about ARM Architecture and its instruction set.
2. To explain the systems development using ARM target boards.
3. To explain the Memory hierarchy, ARM CPU cores & its applications.
4. To design the system applications using Embedded C programming

Introduction: Evolution of Computers, Technological Trends, Measuring performance Speed up, Amdahl's Law. Computer organization: von Neumann Machine Architecture, Functional units and components, Program development tools. Instruction pipelining and parallel processing: Instruction pipeline, hazards, Data forwarding paths, RISC vs. CISC processors.

The ARM Architecture, ARM assembly language programming, ARM organization and implementation, instruction set, Architectural support for system development, ARM processor cores, Embedded ARM applications.

The Embedded Computing Platform: CPU Bus, Memory Devices, I/O Devices, Component Interfacing

### References

<b>EL72106</b>	<b>Digital Image Processing</b>
----------------	---------------------------------

**Course Objectives**

1. To study the image fundamentals and mathematical transforms necessary for image processing.
2. To study the image enhancement techniques
3. To study image restoration procedures.
4. To study the image compression procedures.

**Fundamentals of Image Processing:** Introduction - Steps in image processing systems - Image acquisition - Sampling and Quantization - Pixel relationships - Color fundamentals and models, File formats, Image operations - Arithmetic and Morphological.

**Image Enhancement:** Spatial Domain: Gray level Transformations - Histogram processing - Spatial filtering smoothing and sharpening. Frequency Domain: Filtering in frequency domain - DFT, FFT, DCT - Smoothing and sharpening filters - Homomorphic Filtering.

**Image Segmentation and Feature Analysis** Detection of Discontinuities - Edge operators - Edge linking and Boundary Detection - Thresholding - Region based segmentation - Morphological Watersheds - Motion Segmentation.

**Object Recognition:** Introduction - Pattern and Pattern Class - Selection Measurement Parameters - Approaches - Types of Classification - Bayes, Template matching, Non parametric density estimation, Neural Network approach - Applications.

**Video Processing:** Real time image and Video processing - parallelism - Algorithm simplification strategy - Hardware platforms - DSP, FPGA, GPU, General purpose processors.

<b>EL72101</b>	<b>Mobile System Programming</b>
----------------	----------------------------------

**Course Objectives**

1. Build your own Android apps
2. Explain the differences between Android and other mobile development environments Understand Android applications work, their life cycle, manifest, Intents, and using external resources
3. Design and develop useful Android applications with compelling user interfaces by using, extending, and creating your own layouts and Views and using Menus.

4. Take advantage of Android's APIs for data storage, retrieval, user preferences, files, databases, and content providers
5. Tap into location-based services, geocoder, compass sensors, and create rich map-based applications

**Basics of Operating System :** Component of Computer System, Booting Process, kernel & Evolution of Operating Systems. Real Time Operating Systems, its types-soft real time operating systems,its features and examples, hard real time operating systems its features and examples. Operating Structure: System Call, OS Services, System Program, System Structure, Virtual Machine, and System Design & Implementation. Process Management: Process Concept, Process Scheduling, Process Co-operation, Inter-Process Communication. Memory Management: Paging and Segmentation

**Introduction to Android:** Background and positioning of the Android platform, including comparisons to other popular platforms such as BlackBerry, iPhone, and Windows Mobile, high-level architecture of Android applications and the operating system environment. Introducing Android, Stacking up Android, Booting Android development, An Android application, Summary

**Development environment.:** The Android SDK, Fitting the pieces together, Building an Android application in Eclipse, Building an Android application in Eclipse, The Android Emulator, Debugging

**User interfaces.:** Activity Life Cycle, Creating the Activity, An Overview of User Interfaces  
3.4 Using XML Layouts, Selection Widgets, Date and Time Tabs, Hardware & Software Keyboards, Using Menus, Using Fonts, The WebView and the WebKit Browser, Dialog Boxes: AlertDialog & Toast, Using resources

**Intents and Services:** Working with Intent classes, Listening in with broadcast receivers, Building a Service, Performing Inter-Process Communication

**Storing and retrieving data:** Using preferences, Using the filesystem, Persisting data to a database, Working with ContentProvider classes

**Networking and web services:** An overview of networking, Checking the network status, Communicating with a server socket, Working with HTTPPOST, Working with HTTPGET

**Notifications and alarms:** Introducing Toast, Introducing notifications, Alarms

**Multimedia:**Introduction to multimedia and OpenCORE, Playing audio, Playing video, Capturing media

**Location Services:** Simulating your location within the emulator, Using LocationManager and LocationProvider, Working with maps, Converting places and addresses with Geocoder

## References

1. Operating System Concepts – Silberschtz Galvin Gagne
2. Hello, Android by Ed Burnette

<b>EL72111</b>	<b>Wireless Computer Networks &amp; Internet of Things</b>
----------------	--

## Course Objectives

1. Understand the principles behind the Modern Network approaches such as IoT
2. Ability to analyze topologies and architectures in IoT environment
3. Understand the data traversal over virtualized environment for IoT
4. Design algorithms for enabling IoT
5. Understand the various types of key techniques used in modern networks.

## COMPUTER NETWORKING FUNDAMENTALS

OSI Model, Data transfer referred with OSI Model, IP Addressing, Point to Point Data transfer, Point to Multi Point Data transfer & Network Topologies, Sub-netting, Network Topologies referred with Web, Introduction to Web Servers, and Introduction to Cloud Computing. Overview and working principle of Wired Networking equipment's - Router, Switches, Overview and working principle of Wireless Networking equipment's - Access Points, Hubs etc. Linux Network configuration Concepts: Networking configurations in Linux Accessing Hardware & Device Files interactions.

## DATA TRANSFER PROTOCOLS

Data transfer between nodes using TCP, UDP and HTTP protocols; DHCP. Programming examples for data transfer through sockets in C++ and Java on Windows and Linux.

## Wireless Local Area Networks

(i) Wi-Fi Organizations and Standards: Regulatory Bodies, IEEE, Wi-Fi Alliance, WLAN Connectivity, WLAN QoS & Power-Save, IEEE 802.11 Standards, 802.11- 2007, 802.11a/b/g, 802.11e/h/l, 802.11n (ii) Wi-Fi Hardware & Software: Access Points, WLAN Routers, WLAN Bridges, WLAN Repeaters, WLAN Controllers/Switches, Direct-connect Aps, Distributed connect Aps, PoE Infrastructure, Midspan, Endpoint, Client hardware and software, Antenna types and uses Wi-Fi Security concepts, Wi-Fi Applications

## Wireless Secure Networks (WSN) & Wireless Personal Networks (WPN)

Wireless Personal Area Networks, Bluetooth, Bluetooth Standards, BlueTooth Protocol Architecture, UWB, IEEE 802.15 standards, ZigBee, Sub1GHz, Sensor Networks, Interfacing problems and co-existence strategies in Sensor Networks, Routing protocols in Wireless Sensor Networks.

**IoT Platform Overview** Overview of IoT supported Hardware platforms such as: Raspberry pi, ARM Cortex Processors, Arduino and Intel Galileo boards. Network Fundamentals:

**IoT Architecture:** History of IoT, M2M - Machine to Machine, Web of Things, IoT protocols (i) Applications: Remote Monitoring & Sensing, Remote Controlling, Performance Analysis (ii) The Architecture: The Layering concepts, IoT Communication Pattern, IoT protocol Architecture, The 6LoWPAN (iii) Security aspects in IoT

**IoT Application Development:** Application Protocols- MQTT, REST/HTTP, CoAP, MySQL. Sensors and sensor Node and interfacing using any Embedded target boards. (Raspberry Pi / Intel Galileo/ARM Cortex/ Arduino)

## Choice Based Courses

### NOTICE

The M.Tech. students admitted in one School of Studies can opt a course of minimum 4 credits from M.Tech. programmes being run at other School (s) of Studies. The courses being run in different School (s) of Studies during second semester since (2013-14) at M.Tech. level are listed below:

#### **1. School of Computer Science and IT:**

##### **(i) Programme: M.Tech. in Computer Science**

###### **Courses Offered:**

<b>Course Code</b>	<b>Subjects</b>	<b>Credit( L T P)</b>
CS-6418	Advanced Database Management Systems	5(3,1,2)
CS-6516	Advanced Operating Systems	5(3,1,2)
CS-6517	Advanced Compiler Design	5(3,1,2)
CS-6518	Cloud Computing	5(3,1,2)

##### **(ii) Programme: M.Tech. in Network Management and Information Security:**

###### **Courses Offered:**

<b>Course Code</b>	<b>Subjects</b>	<b>Credit( L T P)</b>
CS-6728	Legal Aspects of Information Security	4(3,1,0)
CS-5718	Network Security	5(3,1,2)
CS-6723	Mobile & Wireless Systems	4(3,1,0)
CS-6727	Web Technology & Java Security	6(3,1,4)

##### **(iii) Programme: M.Tech. in Information Architecture and Software Engineering**

###### **Courses Offered:**

<b>Course Code</b>	<b>Subjects</b>	<b>Credit( L T P)</b>
CS-6313	Software Testing & Quality Assurance	5(3,1,2)
CS-6316	Software Reuse & Customization	5(3,1,2)
CS-4409	Enterprise Resource Planning	5(3,1,2)
CS-6418	Advanced Database Management Systems	5(3,1,2)

#### **2. School of Electronics:**

##### **(i) Programme: M.Tech. in Embedded Systems**

###### **Courses Offered:**

<b>Course Code</b>	<b>Subjects</b>	<b>Credit( L T P)</b>
MTES 21	VLSI Design	4 (4-0-0)
MTES 22	System / FPGA Architecture	4 (4-0-0)
MTES 23	Real Time Operating Systems & Linux	4 (4-0-0)
MTES 24	Embedded System Programming-.NET framework	4 (4-0-0)
MTES 25	ARM & its Interfacing	4 (4-0-0)

##### **(ii) Programme: M.Tech. in Spatial Information Technology**

###### **Courses Offered:**

<b>Course Code</b>	<b>Subjects</b>	<b>Credit( L T P)</b>
MTSIT 21	Global Positioning Network	4 (4-0-0)
MTSIT 22	Digital Image Processing	4 (4-0-0)

MTSIT 23	Remote Sensing	4 (4-0-0)
MTSIT 24	VB& .NET Programming (Framework)	4 (4-0-0)
MTSIT 25	J2ME	4 (4-0-0)

**(iii) Programme: M.Tech. in Mobile Computing Technology**

**Courses Offered:**

Course Code	Subjects	Credit( L T P)
MTMCT 21	Mobile Computing	4 (4-0-0)
MTMCT 22	Mobile Database	4 (4-0-0)
MTMCT 23	Wireless Networks	4 (4-0-0)
MTMCT 24	Mobile System Programming II -J2ME & Python	4 (4-0-0)
MTMCT 25	ARM & its Interfacing	4 (4-0-0)

**3. School of Future Studies and Planning:**

**(i) Programme: M.Tech. in Future Studies and Planning**

**Courses Offered:**

Course Code	Subjects	Credit( L T P)
FS-721	Technology Forecasting & Assessment	4 (3-1-0)
FS-722	Data Mining for Analytics	4 (3-0-2)
FS-723	Industrial Engineering and Systems	4 (3-1-0)
FS-724	System Dynamics	4 (2-1-2)
FS-725	Innovation Management	4 (3-0-2)
FS-726	Market Research	4 (2-1-2)
FS-727	Policy Design and Analysis	4 (3-0-2)
FS-728	Multivariate Analysis	4 (3-0-2)

**(ii) Programme: M.Tech. in Systems Management**

**Courses Offered:**

Course Code	Subjects	Credit( L T P)
SM-721	Mathematical Modelling	4 (3-1-0)
SM-722	System Simulation	4 (2-1-2)
SM-723	Enterprise Resource Planning	4 (3-1-0)
SM-724	Project Management	4 (2-1-2)
SM-725	Data Mining and Data Warehousing	4 (2-1-2)
SM-726	e-Business & e-Governance	4 (3-0-2)
SM-727	Software Quality Management	4 (3-0-2)
SM-728	Artificial Intelligence & Neural Networks	4 (2-1-2)

**4. School of Energy and Environmental Studies:**

**Programme: M.Tech. in Energy Management**

**Courses Offered:**

Course Code	Subjects	Credit( L T P)
EN-703	Heat Transfer And Process Integration	3
EN-704	Engineering Thermodynamics : Quality & Quantity Aspects	3
EN-705	Water and Waste Water: Pollution and Control Technologies	3
EN-710	Environmental Auditing and Environmental Impact Assessment	3
EN-711	Energy Modeling and Project Management	3
EN-717	Computer Applications: Energy Software	3
EN-718	Bio and Fossil Fuels Technology	3

EN-803	Biomass/Biogas laboratory	3
EN-804	Solar Thermal and Photo - Voltaic Laboratory	3

#### 5. School of Instrumentation:

**Programme:** M.Tech. in Instrumentation

**Courses Offered:**

Course Code	Subjects	Credit( L T P)
IS-702	Computer Networks	3
IS-704	Computer Controlled and SCADA Systems	4
IS-706	VLSI Design	4
IS-708	Embedded based system design -II (ARM Micro-Controller)	4
IS-710	Bio-Medical Instrumentation	4
IS-712	Digital Control Systems	4
IS-716	Digital Signal Processing	3
IS-718	Instrument Technology Lab-II	8

#### 6. School of Physics:

**Programme:** M.Tech. in Laser Science and Applications

**Courses Offered:**

Course Code	Subjects	Credit( L T P)
PHY 902	High Voltage Engineering for LASER	4
PHY 904	LASER Systems	4
PHY 906	LASER Application II	4
PHY 908	Optical Communications	4
PHY 910	Free Electron Lasers	3

**Note:**

1. The opted course will be named as choice based course and it will be equivalent to an elective course of that programme.
2. Credits earned through choice based course from other department will be counted in calculating CGPA for the award of the degree in which admission is taken.
3. Time table of opted courses will be announced later.
4. Teaching and examination of choice based course will be conducted by the school of studies where this course is being offered.
5. Each course will have 10 additional seats for the students of other departments.
